

# Proximity P series compact readers

An access control unit and reader in one

## What is it?

The Proximity P series compact readers are part of the Compact range from Paxton. The P series compact range includes three different sizes and offers a screw connector option.

All compacts are standalone, meaning that they do not use a PC in their set up. The Compact products are a control unit and reader in one; they are great for lower security internal and external doors that need to have restricted access.

Compacts are easy to install and easy to use. Because Paxton have made fitting Compact so simple, no specialist installation training is needed and it does not cause disruption to a site.

The easy card pack management is a huge bonus for customers. Paxton Compacts are so much simpler than the competition; you just enrol one card and the whole pack is registered. There is also a straightforward way to bar cards if they get lost. Simple, economic and user-friendly.

Compact is a cost effective way of securing smaller sites or individual doors that need access control. They are designed to look smart as well as offer security. Compact really is the best option for any site that requires great looking, economic access control.

## Specifications

Features
