

#### Important

For Triggers and Actions to function correctly, the Net2 server must be running at all times.

Triggers and Actions is a powerful feature. It can be used to report on specific events as they occur via email, SMS or by playing a sound file. When used in conjunction with I/O boards, it will enable the Net2 to automatically control various systems around a building. For example, when a user enters the building, Net2 can be configured to automatically turn on the lights. It can even be used for more complex tasks. (AN1076 - Integrating Net2 with Lift control systems - < <u>http://paxton.info/842</u> >)

To use Triggers and Actions, you will need to enable it from the menu below:

## Email and SMS text messages

With Triggers and Actions, it is possible to send an email or SMS in response to a pre-defined trigger. For instance, if an ACU goes off line, an email can be sent to the system engineer to investigate the problem.

Email and SMS servers must be configured in the Net2 Server Configuration Utility before these options will appear in the Triggers and Actions wizard.

See the later section of this document for further information on the setting up of these servers.

APN-1067-ZA

## Rules

The Triggers and Actions feature is based around user defined rules. When an event occurs (Trigger) that is defined in a rule, a specific action is performed.

To create a new rule

Select Triggers and Actions from tree view. Click 'Add'

Choose a trigger that will cause this rule to run:

	$\sim$
When a user is granted access through a door	
When a user is denied access through a door	
When a token is presented to a door	
Upon double presentation of a valid token	
When a lost token is presented to a door	
When the intruder alarm is armed	
When the intruder alarm is disarmed	
When an exit button is pressed	
When the door bell button is pressed	
When an input on an IO board is pressed	
When an input on an IO board is released	
When a system setting is changed	
When an access control unit goes offline	
When an access control unit goes online	
When an IO board goes offline	
When an IO board goes online	
When the fire alarm goes off	
When a local alarm occurs at a control unit	
When a timezone becomes active	
When a timezone becomes inactive	
When the on-screen lockdown is activated	
When the on-screen lockdown is deactivated	
When a low battery status is reported	
When a critical battery status is reported	
When a keypad is reported as hacked	
At a specific time	
Run immediately	
When an event occurs on the Net2 Entry system	
When a specific occupancy level is reached within an area	

Follow the wizard through the next steps to configure additional parameters (users, doors, time zones applied to this rule, action delay (see below), action).

The wizard will now ask for the action(s) to be performed. These options are detailed in the following sections. Click 'Next' on the wizard to select and configure the required options.

Note: The double tap rule is not supported on Net2 Entry.

### Action delay timer

An action can be delayed by setting a value in this screen.

ingger	rs and Actions	×
	When a token is presented to a door	
AOC	Set a time delay between the trigger and the actions	
	No delay	
	O Delay actions	
	Set time delay (hh:mm:ss) 00:00:00	
	Cancel < Back	Next > Finish

### I/O Relay

With the addition of an I/O board, you can also provide the trigger through direct hardware input. (AN1066 - Installing an I/O board - < <u>http://paxton.info/506</u> >)

When a specified input is pressed (active) When a specific input is released (inactive)

We do not recommend more than 20 x I/O to be used as PC speed and network limitation may cause reliability issues.

I/O boards can also provide output relays to control other systems. (Lights, Heating, etc)

Select the I/O board and relay that will perform the action and what that action is to be.

,	When a token is presen	ted to a door		
_	When an event matches this	ule, would you like t	o switch any relays?	
	Device Name	Output name	Action	^
	Top I/O board in cabinet	Output 1	Turn on for 5 seconds	
	Top I/O board in cabinet	Output 2		
	Top I/O board in cabinet	Output 3		
	Top I/O board in cabinet	Output 4		
	Bottom I/O board in cabinet			
	Bottom I/O board in cabinet		Turn on	
	Bottom I/O board in cabinet	Output 3		~
	🔿 No change			
	Turn on	Turn	on for	
	O Turn off		*	
	0		seconds	~

# Net2 APN-1067-ZA

## Play a sound (WAV file)

	When a token is presented to a door	
_	When an event matches this rule, would you like to play a sound?	
*	Select the WAV file that you would like to play	
	Windows Hardware Fail.wav Brow	wse
	Choose which clients should play this sound	st
	Ad	łd
	Paxlap274 Rem	ove
	✓ Play on server PC	
	🔿 repeat continually 💿 how many times 🛛 📑 🔿 Stop	

A sound can be played when an event matches the rule. Browse to the sound (\*.WAV) file that you wish to play. Click Test to verify the sound. Select the client computer(s) that you want the sound file to play on by entering the computer name into the middle box and click Add. If you wish the sound to play on the server machine, place a check in the box.

## Email option

0

Triggers and Action	-		>
	Upon double pr	resentation of a valid token	
	When an event m	atches this rule, would you like to send an email?	
	То	example@paxton.co.uk	
	From	net2system@paxton.co.uk	
	Subject	Net2 access alert	
	Attached	🤣 📝 Test custom report	
	Short date	<ul> <li>Alert - suspicious activity detected</li> </ul>	
	Highligh		
	Insen		
		Cancel < Back Next >	Finish

# •

Enter the email address of the recipient, sender and subject in the fields. Multiple email addresses can be used by inserting a ; between each address.

Type in the message text in the box below. You can add event detail by selecting the required data field and clicking insert. Example:

On {date} at {time}, {username} had an {description} event at the {doorname} This would be sent as:

On 22/04/2007 at 11:00, Joe Bloggs had an Access Denied event at the Back Door.

The Highlight button will show the inserted fields, to help you check the final layout.

### SMS option

Triggers and Actions		>
	Upon double pres	entation of a valid token
	When an event matc	es this rule, would you like to send a text message?
	To	07123456789
	Event description ~	{DATE}{time}{username}{description}
	Insert Highlight	
		Cancel < Back Next > Finish

Enter the number that the SMS is to be sent to and then enter the message text in the same format as described previously for email messages. Multiple SMS numbers can be used by inserting a ; between each number in the list.

Example:

On {date} at {time}, {username} had an {description} event at the {doorname}

### This would be sent as:

On 22/04/2007 at 11:00, Joe Bloggs had an Access Denied event at the Back Door.

### Lockdown

Lockdown is the facility to secure the site through a single action by disabling access through selected doors. This includes disabling exit buttons and relocking doors held open by time zones.

Triggers and Actions		×
	Upon double presentation of a valid token	
	When an event matches this rule, would you like to activate or deactivate a lockdown?	
	✓ Activate Lockdown	
	Cancel < Back Next > Finish	

For a description of this special security feature see: AN1122 - How to configure Security Lockdown < <u>http://paxton.info/1743</u> >

### Control a Door

Triggers and Actions		×
	Upon double presentation of a valid token	
-	What action would you like to perform on the doors selected?	
	Open door	
	Door open time 7 seconds	
	◯ Hold Door Open	
	◯ Close Door	
	◯ Toggle output	2
	Cancel < Back Next > Finish	1

You can directly control a door lock by selecting an action on this screen. The open door function unlocks the door for the 'Door open time' and it then relocks.

The Hold Door Open function unlocks the door and must be reset with another T&A rule using the 'Close Door' function to relock the door.

### Run a .exe file

Upon double presentation of a valid token
When an event matches this rule, would you like to execute an application?
Select the application that you would like to run
C:\Program Files\Paxton Access\Entry\Nes.ConfigurationUtility.exe Bro
Choose which clients should run this application
A
Paxlap274 Rer
Cancel < Back Next >

You can directly run a .exe program from a trigger.

Browse for the program and click ' Next'.

Email and SMS servers must be configured in the Net2 Server Configuration Utility before these options will appear in the Triggers and Actions wizard.

### Setting up the email server

Run the Net2 Server Configuration Utility. Click on the email tab and enter the relevant details for the email server. This is normally the servers name or IP address.

If authentication is being used select Basic or NTLM authentication, enter the account name and password.

Check that the email configuration is correct by sending a test email. Enter your email address into the box and click the Send button. A test email should be received, confirming that the settings are correct.

		Send

If the test email fails, check that any anti-virus software is not blocking port 25.

It is possible to test whether the port is available using HyperTerminal. Open HyperTerminal through Start/ Programs/Accessories/Communications/HyperTerminal. Create a new connection. Connect using TCP/IP (Winsock). The Host address is the email server and the port number needs to be set to 25. If the port is available, details of the server will be shown on the screen.

## Setting up the SMS server

To enable SMS you must have an account with www.textanywhere.net.

Run the Net2 server configuration utility. In the SMS tab click the Create button which will connect you to the Textanywhere website. Fill in the Open Account details. When the account has been created you will receive an email. A second email will follow shortly after confirming that your account is now active.

Log in to the Textanywhere website through the client log in link and enter your email and password. You need to note the Client\_ID and Client\_Pass as shown in the account details page.

In the Net2 Server Configuration Utility enter your Textanywhere Client\_ID into the Account field and Client\_ Pass into the Password field. The Originator field may be left blank, Textanywhere will use the mobile number associated with the account. The billing reference must be entered.

Send a test SMS by entering a telephone number into the box and clicking the Send button. A test SMS should be received to confirm that the settings are correct.
