

# Connecting a Suprema Thermal FaceStation 2 reader to Net2

## Overview

The FaceStation 2 is an IP based face recognition reader, it includes a Wiegand output for easy connection to the Net2 access control system. The FaceStation 2 needs to be configured via Suprema's software. The FaceStation 2 is available with an optional thermal camera for thermal scanning functionality.

The FaceStation 2 needs to be connected via Wiegand to the ACU via the wiring diagram below.

A separate 12 or 24 volt power supply is needed for the reader. It cannot be connected to the reader output terminals of the Net2 controller due to its high power consumption.

Cable Pinout	ACU terminal
-	+12V
-	Red LED
-	Amber LED
-	Green LED
Green	Wiegand D0
White	Wiegand D1
-	NOT USED
Black	0V

Ensure any unused wires are safely terminated.

The FaceStation 2 is tested via a 26bit Wiegand output, however more options are available. The Reader setting in Net2 has been set to "Wiegand" and "Wiegand 26 bits".

The Wiegand settings for the FaceStation 2 needs to be configured as following;

**Input/Output:** Output

**Wiegand input format:** ID#1 26 bit SIA Standard – H10301

**Pulse width(µs):** 50

**Pulse Interval(µs):** 1000

The integration download and instructions can be found here:
