

Configuring an Entry Panel

Overview

The Entry panel is a robust external panel for use with Paxton's door entry system and is used to remotely communicate with visitors. It is powered using Power over Ethernet (PoE) and communicates with the other elements of the system using IPv6, providing plug-and-play installation.

To get the most out of your Paxton system it is recommended that you always run the latest version of software by going here: <www.Paxton.info/1907>

When using Entry the following minimum software versions are required:

- Paxton10 – v3.2 or higher
- Net2 – v4.27 or higher
- Entry – v2.20 or higher

Use the up and down arrows on the panel to view all the menu options.

Use the  key to Cancel

Initialising a new system

The first time the system is powered up the panel will request that the Language to be used is confirmed.

It then asks for an Engineer code to be set up. Enter the required code and press the bell key. Confirm the code and press bell to complete the process.

The Entry system uses a separate control unit to operate the door. To associate a panel with its control unit, the Serial Number of the control unit must be entered.

Calling a monitor unit

As Monitor units are added to the system, they will automatically become active. To call a monitor type in the monitor ID and press the Bell button.

Single occupancy

When only one monitor ID is in use, pressing the Bell button will call the monitor.

Concierge

When concierge exists on a site, pressing the Bell button will call the concierge.

How an occupant gains entry

For access control, a Net2 system or Paxton10 system is required for administration. Once set up, a user can gain entry by presenting their token to the panel. For PIN or Code entry, the # key must be pressed first before pressing the numbers on the panel.

Using the engineer menu

To access the Engineer menu from the default screen press * twice, enter the Engineer code and press the Bell button.

Door open time

From the Engineer menu - Press key 1

This is the time period that the lock will stay released once the open door button has been pressed on a monitor. This value may only be changed when not administered by Net2 or Paxton10.

Volume settings From the Engineer menu - Press key 2

1. Set voice volume - from volume settings menu - Press key 1
